

7-Day 309A Retake Plan

Baseline. Repair. Retest.

HOW TO USE THIS PAGE

Use your score breakdown to choose the next study block. Aim for 30 to 60 focused minutes each day. This is an independent study aid, not an official exam guide or a substitute for current code and course material.

DAY 1

Build a baseline

Take one mixed set without notes. Record the two weakest areas and every answer you guessed.

DAY 5

Return to mixed practice

Run 25 to 50 mixed questions. If an old error repeats, go back to focused review instead of guessing again.

DAY 2

Verify the misses

Use official and current course or code material. Write the concept in your own words - never copy rule text.

DAY 6

Add time pressure

Take a timed mixed set. Practise pace, safe sequencing, and efficient lookup without rushing decisions.

DAY 3

Repair weak area 1

Use two focused study blocks. For each miss, explain the safe decision and why your first choice failed.

DAY 7

Protect exam readiness

Review formulas and weak-area notes, verify exam logistics with official sources, and stop early enough to rest.

DAY 4

Repair weak area 2

Repeat the process for your second weak area. Finish with a short topic set and review every miss.
