One wrong answer. One next step.

Keep your attempt. Find the first mismatch. Repair it. Try a fresh check.

Date

Topic / practice session

1 Keep the evidence

Question ID / source reference

What was asked for? Include the key condition, in your own words.

My original method and answer / the first point that needs a change

2 Choose a tentative cause

- ☐ Concept
- ☐ Reading
- ☐ Arithmetic
- ☐ Unsure / other

Concept: explain the relationship. Reading: restate the requested result and conditions.
Arithmetic: check the calculation after confirming the setup. More than one cause may apply.
A wrong answer alone does not identify the cause. Use the working and an explanation.

Evidence for my choice / the precise point I still need explained

3 Choose one repair and a fresh check

Repair: what will I explain, reread or recompute?

Fresh check: new prompt, representation or requested quantity / reference

4 Check and decide

When will I try the fresh check?

My fresh result and why it makes sense / what is still uncertain

Next step: move on with a reason, revisit, or ask a precise question

Use question references and your own working; do not copy official or recalled exam text.
This worksheet plans a review step. It does not diagnose ability or predict an exam result.
